Backend Developer Task Project

Design

Here is the git repo link for the front end:

https://github.com/Shamonti/backend-task-project-02

Task Instructions:

1. Initially assign 50 credits for each user

2. Deduct one credit each time "access email" button is clicked and show the email

3. Deduct one credit and download data as csv each time a checkbox is selected and the "Download Selected Data" button is clicked. One download will deduct one credit only for the first time.

4. Deduct one credit each time a filter is used.

5. Use "Select All" to check all checkboxes and download data as csv when "Download Selected Data" button is clicked and deduct the equivalent number of credits.

Basic Instructions:

1. Make sure you share the database along with the project

2. The project must be completed using the Laravel Framework.

3. **Make your repository public & share the URL with us so that we can check.**

4. Commit early and often. Don't commit to everything after completing the assignment.

Deadline: **2 days**
